

DARKO DAVIDOVIC, VP Software Development

Eager for new, engaging opportunities, Darko Davidovic came to Canada from Yugoslavia in the late 1990s with a background in electrical engineering and software development. He enrolled in an adult employment program through the local school board and, after deciding he wanted to build a career in software and technology, landed a placement at Intellex in late 1999.

Darko worked on many of Intellex's early PC-based applications, eventually expanding his role to cover aspects of quality assurance, coding and product development. By the time his internship reached an end in January 2000, Intellex founder Ted Grunau invited Darko to take a full-time position with the company. Five years later, after being exposed to most aspects of the creation of Intellex's web-based solutions, Darko was promoted to manager and, in 2007, to VP of Application Development. Now he works to ensure his team stays ahead of the curve and constantly develops industry-leading solutions that can be used with ease.

"Though I am in software development, what I actually love about my job is the fact I get to work with people – to see new ideas evolve and discover how, through collaboration, our products and community can continuously improve and expand," Darko says. "What's unique about Intellex is that while our growth has exploded in the last ten years, we've retained a true family atmosphere. While our focus on building leading-edge solutions always comes first, we all care deeply for one another and genuinely have fun working together."
