

Canadian Pipeline Company Improves Safety Processes with Intelex

Not only does the Intelex System allow for optimal organization and distribution of documents, manuals, and procedures, it increases internal accountability ensuring health and safety issues are dealt with in a timely fashion. Using Intelex to ensure the effectiveness of our performance provides a safer environment for employees, contractors, and in our case, the public.

Alan Conquergood
President
Trans-Northern Pipelines, Inc.

Challenge

- Wanted means of improving efficiency in processing integrity concerns including health and safety issues.
- Required reliable system able to withstand scrutiny of external auditing process.
- Needed means of making internal documentation and procedures accessible organization wide.
- Desired a system that could encompass health and safety standards as well as ensuring overall regulatory compliance.

Solution

- Implemented Intelex's Safety Management System (SMS) targeting timely and accurate processing of health and safety related issues.
- Uniquely configured the Intelex System to suit several specific risk areas of business.
- In depth training provided by Intelex Client Services Team facilitated understanding of configured workflow, responsibilities, and tasks received through system.
- Use of Document Control System allowed appropriate literature to become available to employees organization wide.

Results

- Effective roll out of Intelex Safety Management System (SMS) has helped increase employee health and safety processing and accountability.
- Intuitive workflow and ease of system usability allow users to easily understand end goals and objectives.
- Effective training by the Intelex Client Services Team has allowed Trans-Northern Pipelines to better manage health and safety issues.
- Plan to utilize iForm System to further enhance specific risk management processes.
